**Maintenance Office: 200 Fairview Drive – Monaca, PA 15061 – Tel: 724-774-7766**

---

This report is designed to inform you about the quality and services we deliver to you every day. Our goal is to provide a dependable supply of drinking water from our water source of four (4) wells located along the Ohio River. We want you to understand the efforts we put forth to continually improve the water process and protect our water resources. We are committed to ensuring the quality of your water. **We are pleased to report that our drinking water meets Federal and State requirements. If you have any questions about this report, please contact the Center Township Water Authority at 724-774-7766 Monday through Friday from 7 a.m. to 3 p.m.** We want our customers to be informed about their water utility. You may attend any of our regularly scheduled meetings, held on the third Tuesday of each month at 4 p.m. at the Authority's office located at 224 Center Grange Road. The Center Township Water Authority routinely monitors for contaminants in your drinking water according to Federal and State laws. Information on the next page outlines the results of the latest monitoring required by regulation for the period from Jan. 1 through Dec. 31 of the year 2009.

**DEFINITIONS** *The tables on the following page contain terms and definitions that may be unfamiliar to you. To help you understand these terms, we have provided the following definitions:*

**PARTS PER MILLION (PPM)** – One part per million. Equal to one minute in two years or a single penny in \$10,000.

**PARTS PER BILLION (PPB)** – One part per billion. Equal to one minute in 2,000 years or a single penny in \$10,000,000.

**ACTION LEVEL (AL)** – The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**MAXIMUM CONTAMINANT LEVEL** – The 'Maximum Allowed' (MCL) is the highest level of a contaminant allowed in drinking water. MCL's are set as close to the MCLG's as feasible using the best available treatment technology.

**MAXIMUM CONTAMINANT LEVEL GOAL** – The 'Goal' (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLG's allow for a margin of safety.

**MAXIMUM RESIDUAL DISINFECTANT LEVEL (MRDL)** – The highest level of a

disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**MAXIMUM RESIDUAL DISINFECTANT LEVEL GOAL (MRDLG)** – The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLG's do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**WE'RE PROUD THAT YOUR DRINKING WATER MEETS OR EXCEEDS ALL FEDERAL AND STATE REQUIREMENTS.**

A source water assessment of our sources was completed in 2003 by the PA Department of Environmental Protection (PADEP). The assessment found that our sources are potentially susceptible to accidents and spills along nearby transportation corridors (roadways, railroads, and river traffic), or at local industrial sites. Overall, our sources have a high risk of significant contamination. Summary reports of the assessment are available at the Authority office and also on the PADEP website at [www.depweb.state.pa.us](http://www.depweb.state.pa.us) (Keyword: 'source water'). Complete reports were distributed to the Authority water system and PADEP offices. Copies of the complete report are available for review at the PADEP Southwest Regional Office in Pittsburgh, Records Management Unit at 412-442-4000.

*Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemo-therapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.*

The sources of drinking water (both tap water and bottled water) include rivers, lakes streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water run-off, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

- Pesticides and herbicides, which may come from a variety of sources such as agricultural, urban storm water run-off, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial process and petroleum productions, and can also come from gas stations, urban storm water run-off, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA and DEP prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA and DEP regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency’s Safe Drinking Water Hotline (1-800-426-4791).

In keeping with our pledge to provide a good drinking water source, the Department of Environmental Protection has approved and recognized the efforts of the Center Township Water Authority for its Wellhead Protection Plan. This plan assists in protecting the wells from possible contaminants from entering the wells and protects public health and safety. We at the Center Water Authority work around the clock to provide quality water to every tap. We ask all our customers to help us protect our water resources, which are the heart of our community, our way of life and our children’s future.

***BILL PAYING MADE EASY***

*Use our convenient drive-through window located at the rear of the Center Township Municipal Complex, 224 Center Grange Road. You may also slip your payment into the payment slot during off-hours.*

<b>TEST RESULTS</b>						
<b>CONTAMINANTS (UNIT OF MEASUREMENT)</b>	<b>VIOLATION? Y/N</b>	<b>LEVEL DETECTED</b>	<b>RANGE</b>	<b>MCLG</b>	<b>MCL</b>	<b>LIKELY SOURCE OF CONTAMINANTS</b>
Copper (ppm)	N	0.908 (6/26/07)	(b)	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits
Lead (ppb)	N	0.0 (6/26/07)	(b)	0	AL=15	Corrosion of household plumbing systems; erosion of natural deposits
Nitrate (as nitrogen) (ppm)	N	0.34 (7/6/09)	(a)	10	10	Run-off from fertilizer use; from septic tanks; sewage, erosion of natural deposits
Total Trihalomethanes	N	1.3	(a)	n/a	80	By-product of drinking

(ppb)		(8/26/09)				water disinfection
Haloacetic Acids (ppb)	N	1.0	(a)	n/a	60	By-product of drinking water disinfection
		(8/26/09)				
<b>DISINFECTANT</b>						
Chlorine (ppm)	N	0.90	0.65-0.90	4.0=MRDLG	4.0=MRDL	Additive used to control microbes

Footnotes: (a) Samples taken on dates shown. These are the latest samples required by regulation.  
(b) These are the 90<sup>th</sup> percentile results. All 33 samples were below the action level.

*'If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Center Township Water Authority is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline, 1-800-426-4791, or online at <http://www.epa.gov/safewater/lead>.'*

### IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

#### Availability of Monitoring Data for Unregulated Contaminants for The Center Township Water Authority

Our water system has sampled for a series of unregulated contaminants. Unregulated contaminants are those that don't yet have a drinking water standard set by the USEPA. The purpose of monitoring for these contaminants is to help EPA decide whether the contaminants should have a standard. As our customers, you have a right to know that this data is available. If you are interested in examining the results, please contact Ron Crisi at 724-774-7766, or by mail at 200 Fairview Drive, Monaca, PA 15061.

We also analyzed water samples for the following contaminants, and *did not* detect these compounds:

<u>Inorganic Contaminants (9/02)</u>	<u>Volatile Organic</u>	<u>Contaminants 7/06)</u>
Antimony	Benzene	Trichloroethylene
Arsenic	Carbon Tetrachloride	Toluene
Beryllium	Chlorobenzene	Xylenes
Cadmium	o-Dichlorobenzene	
Chromium	p-Dichlorobenzene	
Cyanide	1,2-Dichloroethane	Unregulated Contam. (6/03)
Mercury	1,1-Dichloroethylene	Perchlorate, total
Nickel	cis-1,2-Dichloroethylene	DCCA acid degradate

Selenium	trans-1,2-Dichloroethylene	Methyl-t-butyl ether
Thallium	Dichloromethane	Nitrobenzene
	1,2-Dichloropropane	4,4-DDE
	Ethylbenzene	Acetochlor
	Styrene	2,4-Dinitrotoluene
Microbiological Contaminants	Tetrachloroethylene	2,6-Dinitrotoluene
Total Coliform (Tested Monthly)	1,2,4-Trichlorobenzene	EPTC
	1,1,1-Trichloroethane	Molinate
	1,1,2-Trichloroethane	terbacil
